Nationality: German

PROFILE

Stefan Sturm is a senior iOS developer with more than 15 years of experience building high-quality mobile applications with Swift. His focus includes reactive and declarative user interfaces with SwiftUI and Combine, Swift Concurrency with async/await and Actors, and practical work with Foundation and iOS platform APIs.

He safeguards delivery with automated tests in Swift Testing and XCTest and relies on robust GitLab CI/CD processes. His project experience at companies such as Chrono24, 1&1, RTL, Nexenio and Porsche covers complex product environments as well as an international e-commerce and marketplace setting. Professional German and English support close collaboration in interdisciplinary teams.

Technical Skills

Expanded Resume

iOS Development

- Swift 10 years
- SwiftUI 5 years
- UIKit 15 years
- Combine 5 years
- Swift Concurrency 3 years
- async/await 3 years
- Actors 3 years
- Foundation 15 years
- iOS platform APIs 15 years
- Widgets / Siri 5 years
- Apple Watch 10 years
- iPhone / iPad 15 years

Cross-platform

- KMP (Kotlin Multiplatform)

Architecture

- MVVM
- MVVM+C
- CleanSwift
- Viper
- MVC
- TCA

Backend & APIs

- REST/JSON 20 years
- GraphQL 6 years
- Vapor 6 years

Tools & CI/CD

- Xcode 15 years
- Git 15 years
- Jenkins 15 years
- Jira / Confluence 20 years
- Shell 20 years
- GitLab CI/CD
- Azure DevOps
- Xcode Cloud
- SPM
- CocoaPods
- RocketSim
- App Store Connect CLI

Agile Ways of Working

- Scrum
- Kanban

Testing

- Swift Testing
- XCTest 10 years
- UI Tests 10 years
- Snapshot Tests 10 years

Security & Crypto

- CryptoKit
- CryptoSwift
- Bluetooth
- Encryption

AI & Agentic Development

- Agentic Coding
- Prompt & Context Engineering
- Planning & Execution Skills
- AI-assisted Testing
- AI Code Review
- Model & Reasoning Selection
- MCP Integration

AI Harnesses & Tools

- Codex
- Grok
- Claude Code
- XcodeBuildMCP

AI-Supported Development

I combine extensive iOS experience with AI-supported and agentic development. AI is not an autopilot; it is a precisely directed engineering tool. I structure the context, select the model and reasoning depth for the task, and verify every result through code, tests, and engineering experience.

WORKFLOW

01
Planning
Clarify goals, context, risks, and acceptance criteria with brainstorming and writing-plans.

02
Verification
Inspect the codebase, APIs, requirements, and assumptions before changes are made.

03
Implementation
Execute focused tasks with suitable Skills and MCPs, backed immediately by tests.

04
Code Review & Delivery
Review diffs, tests, regressions, performance, and security; deliver changes in a controlled way.

HARNESSES / CODING AGENTS

Codex — Planning & Business Logic
For specifications, implementation plans, architecture decisions, and the structured implementation of complex business logic.

Grok — Planning, Cross-checking & Business Logic
For alternative approaches, technical cross-checking, and the development of demanding business logic.

Claude Code — UI & Creative Work
For UI concepts, visual refinement, creative exploration, and the implementation of high-quality interfaces.

SKILLS

Planning & Execution
brainstorming, writing-plans, executing-plans

Apple Platforms
swiftui-expert-skill, swift-concurrency, swiftdata-pro, swiftui-liquid-glass

Quality & Delivery
swiftui-performance-audit, test-triage, asc-release-flow

MCPS

XcodeBuildMCP — In use
Builds, tests, simulator runs, logs, debugging, and visual UI verification for Apple platforms.

Browser / Computer Use — In use
Documentation research, browser automation, and visual verification of web and app flows.

Devil MCP Server — In development
A custom MCP server is being built to expose selected Devil capabilities to AI agents.

REASONING & TOKEN EFFICIENCY

I choose the model and reasoning depth according to the work phase and risk: planning and review deliberately receive more reasoning, while an agreed plan can be implemented with far fewer tokens. This logic is model-agnostic and applies, for example, to Codex Sol and Luna just as it does to Claude Opus and Fable.

Max — Planning
Analyze requirements, risks, and architecture with maximum reasoning depth, then produce the specification and a robust implementation plan.

Low — Implementation
Execute the agreed plan efficiently and with low token usage; the key decisions have already been made.

Low / High — Bug Fixing
Use Low for simple UI and layout issues; use High for complex logic, state, data, or concurrency bugs.

High — Code Review
Thoroughly and independently review diffs, tests, regressions, performance, and security.

IN PRACTICE

Devil - Apple Developer Toolkit
Developed end to end using AI-supported, agentic workflows under my technical direction.

Fast.io - Fasting Timer
Developed end to end using AI-supported, agentic workflows under my technical direction.

Ripple - Water Tracker
Open-source water tracker for Apple devices, including the AI-assisted port of the app to Android.

EnBW - New App Platform
AI-assisted workflows for planning, technical verification, implementation, tests, and code reviews.

Professional Experience

Senior iOS Developer

EnBW - Karlsruhe

03/2025 - present
CURRENT

At EnBW, I support the development of a new app platform. I use AI-assisted workflows for planning, technical verification, implementation, automated testing, and code reviews while retaining engineering ownership.

Swift · SwiftUI · KMP (Kotlin Multiplatform) · Combine · TCA · MVVM · Swift Concurrency · SwiftData · Foundation · XCTest · Swift Testing · GitLab CI/CD · REST (JSON) · Software architecture · CI/CD · Jenkins · Pull requests · GitLab · Git · Xcode · Azure DevOps · UI tests · Unit tests · Snapshot tests · SPM · Agentic Coding · AI-assisted Development

Senior iOS Developer

Chrono24 - Karlsruhe

11/2024 - 02/2025

Chrono24 App

At Chrono24, I supported the redevelopment of the catalog in an international e-commerce and marketplace environment.

Swift · SwiftUI · KMP (Kotlin Multiplatform) · Combine · TCA · CleanSwift · Swift Concurrency · SwiftData · Foundation · XCTest · Swift Testing · GitLab CI/CD · REST (JSON) · GraphQL · CI/CD · Jenkins · GitLab · Git · Xcode · Jira · Confluence · UI tests · Unit tests · Snapshot tests · SPM · E-Commerce · Marketplace

Senior iOS Developer

1und1 - Munich

03/2024 - 10/2024

1&1 Mail Apps (e.g. GMX)

At 1&1, I worked on cloud interactions in the mail apps. During that time, we completed a larger migration from UIKit to SwiftUI. I also completed attachment support in the mail list.

Swift · UIKit · SwiftUI · KMP (Kotlin Multiplatform) · Combine · REST (JSON) · Viper · CI/CD · Jenkins · GitLab · Git · Xcode · Jira · Confluence · UI tests · Unit tests · Snapshot tests · CocoaPods · SPM

Senior iOS Developer

RTL - Cologne

02/2022 - 09/2023

RTL+ App

At RTL, I first worked on the magazine team and accompanied that area from the beginning through to public release. During development, we built several UIKit components that were also used by other teams across the RTL+ app. Later, we connected live events to the existing streaming area, implemented completely in SwiftUI and embedded into the existing UIKit application.

Swift · UIKit · SwiftUI · KMP (Kotlin Multiplatform) · Combine · REST (JSON) · GraphQL · CleanSwift · CI/CD · Jenkins · GitLab · Git · Xcode · Jira · Confluence · UI tests · Unit tests · Snapshot tests · CocoaPods · SPM

Professional Experience

Expanded Resume

Senior iOS Developer

06/2021 - 01/2022

Nexenio (Luca App) - Berlin

Luca App

During the Covid period, I worked on the Luca App. The project had a strong focus on app security and data encryption. We built a complex system for storing and transporting encrypted data so it was possible to match who had been at a specific place at a specific time without knowing exactly who was there.

Swift · UIKit · RxSwift · REST (JSON) · GraphQL · MVVM+C · CI/CD · Jenkins · Bitbucket · Git · Xcode · Jira · Confluence · UI tests · Unit tests · Snapshot tests · CocoaPods · SPM · CryptoKit · CryptoSwift

Senior iOS Developer

01/2021 - 05/2021

Comdirect - Rostock

Comdirect PhotoTAN App

At Comdirect, I worked on the PhotoTAN app. The main topic was migrating many areas from UIKit to SwiftUI. We also had to ensure smooth collaboration with the Comdirect banking app.

Swift · UIKit · SwiftUI · RXSwift · REST (JSON) · Viper · CI/CD · Jenkins · BitBucket · Git · Xcode · Jira · Confluence · Unit Tests · Snapshot Tests · Cocoapods · SPM

Senior iOS Developer

04/2020 - 12/2020

Buhl - Mannheim

Steuer:Phone App

At Buhl, I joined ongoing development of the Steuer:Phone app. The first major task was migrating the existing architecture from MVC to MVVM+C. A special aspect of the app is that the dialogs are generated on the server side and sent to the client as JSON. The client transforms this complex JSON into UIKit dialogs.

Swift · UIKit · REST (JSON) · MVVM+C · CI/CD · Jenkins · Gitlab · Git · Xcode · Jira · Confluence · UI Tests · Unit Tests · Snapshot Tests · Cocoapods · SPM

Senior iOS Developer

06/2019 - 03/2020

Porsche - Ludwigsburg

My Porsche iOS App

Development and continued improvement of the My Porsche iOS app for Porsche drivers.

Swift · UIKit · RXSwift · REST (JSON) · MVVM+C · CI/CD · Jenkins · Gitlab · Git · Xcode · Jira · Confluence · UI Tests · Unit Tests · Snapshot Tests · Cocoapods · SPM

Professional Experience

Senior iOS Developer

iWelt - Wuerzburg

04/2017 - 05/2019

The iWelt app was an internal iPad-only app used by sales staff. Its defining feature was multi-level navigation where several layers could be opened and closed via swipe gestures.

Swift · UIKit · CouchDB · Realm · REST (JSON) · CleanSwift · CI/CD · Jenkins · Gitlab · Git · Xcode · Jira · Confluence · Unit Tests · Cocoapods

Senior iOS Developer

Tallence - Hamburg

Miles & More Worldshop Discover

11/2016 - 03/2017

During development of the Worldshop Discover app, the main focus was migrating from MVC to MVVM and moving from Objective-C to Swift.

Swift · Objective-C · UIKit · CouchDB · Realm · REST (JSON) · MVVM · CI/CD · Jenkins · Gitlab · Git · Xcode · Jira · Unit Tests · Cocoapods

Senior iOS Developer

DRF - Koblenz

DRF-TV Streaming App

03/2015 - 10/2016

The app was a complete new development and the first Swift project. Everything was built with the newly introduced Swift 1.0. We reimplemented several third-party frameworks internally in Swift, which was a major challenge for video streaming.

Swift · UIKit · REST (JSON) · MVVM · Gitlab · Git · Xcode · Unit Tests · Cocoapods · Streaming

Professional Experience

Senior iOS Developer

Vodafone - Duesseldorf

Secure Net Wifi V 2.0

01/2015 - 02/2015

Development of the iOS universal application Secure Net Wifi V 2.0.

Objective-C | UIKit | CouchDB | Realm | REST (XML) | MVC | GitLab | Git | Xcode | Unit tests | CocoaPods

Senior iOS Developer

Bosch - Viersen

Confectionery App

01/2014 - 08/2014

Development of the iOS universal application Confectionery.

Objective-C | UIKit | REST (JSON) | MVC | GitLab | Git | Xcode | Unit tests | CocoaPods

PHP/Frontend Developer

Various - Germany

2004 - 2013

Various projects as a PHP / frontend developer.

PHP | HTML | CSS | JavaScript

Projects

Devil - Apple Developer Toolkit

2026 - present

View website

A native macOS 26 menu-bar app for Apple-platform developers. Devil cleans Xcode and SPM caches, controls simulators, supports Git workflows with diffs, commits, pushes and pull requests, and bundles references and everyday developer utilities. The app is sandboxed and mostly offline; commit messages are generated locally with Apple Intelligence. A custom MCP server for Devil is currently in development. Developed end to end using AI-supported, agentic workflows under my technical direction.

Swift · SwiftUI · Swift Concurrency · Foundation · AppKit · Apple Intelligence · macOS 26 · GitHub · XCTest · Xcode Cloud · MVVM · MCP

Vector Racer

2026 - present

View on the App Store

An original vector-only arcade racer inspired by a 1992 polygon cabinet. Five cars, six handcrafted circuits, deterministic 60 Hz driving, local best laps, and Game Center achievements and leaderboards unfold across flat-shaded worlds made from untextured triangles.

Swift · SwiftUI · Swift Concurrency · GameKit · AVFoundation · MVVM

Ripple - Water Tracker

2026 - present

View on the App Store · View on Google Play · View on GitHub

A calm, open-source water tracker for iPhone, iPad, and Apple Watch. Log water in the app, through widgets, Siri, Control Center, or reminders, then keep an eye on today's goal, history, and statistics. SwiftData and CloudKit keep data in sync, while HealthKit is optional. With AI assistance, a separate native Android app was built with Kotlin and Jetpack Compose and is now available on Google Play.

Swift · SwiftUI · Swift Concurrency · SwiftData · CloudKit · HealthKit · WidgetKit · App Intents · MVVM · Kotlin · Jetpack Compose · Android

Fast.io - Fasting Timer

2025 - present

View on the App Store

An easy-to-use intermittent fasting timer for iPhone and Apple Watch. Fast.io helps users consistently track fasting goals with real-time tracking, hydration logging, Live Activities, Dynamic Island, Home Screen widgets and Apple Health integration. It supports popular fasting schedules such as 16:8, 18:6 and OMAD. Available as a one-time purchase, no subscription. Developed end to end using AI-supported, agentic workflows under my technical direction.

Swift · SwiftUI · Swift Concurrency · Foundation · Swift Testing · XCTest · HealthKit · Live Activities · WidgetKit · Apple Watch · Dynamic Island · Xcode Cloud · MVVM

OverlayLab - Weather Camera & Text Overlays

2025 - present

View on the App Store

Turns every photo into a story with live weather, location and text overlays. Users can capture photos or import them from the library, add weather details such as temperature, humidity and wind, include date, time and custom text, customize styles and share directly. The Pro version supports 5-second videos with overlays and export without branding.

Swift · SwiftUI · CoreLocation · WeatherKit · Photos · AVFoundation · Xcode Cloud · MVVM

S3XY Watch for Tesla

12/2022 - present

View on the App Store

Development of an app for controlling and monitoring a Tesla. The app is built entirely with the latest Apple frameworks because I use it as a learning project for new technologies. It consists of the app itself plus a REST API, also developed with Swift / Vapor.

Swift · SwiftUI · Vapor · REST (JSON) · MVVM · Xcode Cloud · Tesla API · Bluetooth · CryptoKit · CryptoSwift

Education

Information Technology 1993 - 1995
University of Applied Sciences, 4 semesters electrical engineering

Software Development 1995 - 1996
Dekra, Duesseldorf

Electrical Engineering 1986 - 1987
Vocational school, Kempen

University of Applied Sciences entrance qualification 1991 - 1993
Fachoberschule, Kempen

Communication Electronics Technician 1987 - 1991
Deutsche Bahn, Krefeld/Wuppertal

Secondary school certificate 1980 - 1986
Hauptschule, Willich
